

Evaluation Form #2

Name (optional): Patrick Marren

Email Address: (deleted for tester's privacy)

Device Used:Dell Axim X5 Advanced

Operating System: WM 2003

Program Version: Beta 1.5

Did you have any problems installing the program?

No. Installed on SD Card.

Did you have any problems running the program?

Test 1: Standard setup - no problems.

Test 2: CDB file renamed – program loaded but responded that the database was not found.

Test 3: CDB set to read-only - program loaded but responded that the database was not found.

Test 4: With program running, try to run a second instance. - Failed to recognize that the program was already running and loaded a second and third instance of it. This just may be the way that eVB works.

Did you have any problems navigating through the program?

No. I was able to navigate through the tree in it's entirety.

Did you notice any bugs in the program (please be specific), such as cut-off text?

No.

Please list any suggestions you have for future builds:

Change the “welcome” dialog box title to something other than ‘Visual Basic’and show it after the program is loaded. If the database is not found warn the user as you do, but also exit the program. Also change the title for the “Database not found” dialog to something more meaningful.

Include a menubar with choices for an About dialog box and choices to collapse the current node and collapse all.

Don't know if it is possible, but capture a D-pad press (enter) event and use that to expand a node to allow the user to navigate fully with the D-pad.

Other questions or comments:

I wish you much success on this project.
